THE EASY, EFFICIENT WAY TO REUSE PRECAUTION GOWNS.

THE REUSABLE ADVANTAGE.

More and more hospitals are taking a closer look at the financial and environmental costs of disposable apparel. Disposable precaution gowns are an obvious area of concern—a typical hospital uses numerous precaution gowns a day, many worn for only a minute or two.

Still, many hospitals have continued to choose disposables over reusable precaution gowns, primarily because of the perceived convenience or presumed advantages of disposable gowns in distribution, handling, and dispensing.

Until now.

HOSPITAL: CONVENIENT TO DISTRIBUTE AND DISPENSE GOWNS.

The patent-pending Precaution Gown Dispenser Bag from Standard Textile makes reusable gowns more convenient to dispense. The innovative dispenser bag simply hangs over a door or hook, and visitors and staff members pull out individual gowns from the bottom of the bag. The design ensures that only one precaution gown is cleanly and conveniently dispensed at a time.

For hospitals, the Precaution Gown Dispenser Bag offers a means to lower the cost per use of precaution gowns while enhancing environmental stewardship.

The Precaution Gown Dispenser Bag is fully compatible with Standard Textile's Compel® Precaution Gowns, which provide the ultimate in comfort and protection.

LAUNDRY: EFFICIENT TO PROCESS AND DELIVER.

The Precaution Gown Distribution Dispenser Bag is just as efficient from a production standpoint.

Each bag can be filled with approximately 20 laundered gowns. Gowns don't have to be folded, so the process is simple and quick—less than 90 seconds per bag in real-world testing. Loaded bags can then be distributed back to the hospital as ready-to-use units.
